Name: - Juili Pradeep Vyas

Roll no: - 86982

Assignment 13

1) Create a union of two queries that shows the names, cities, and ratings of all customers. Those with rating of 200 or greater will also have the words "High Rating", while the others will have the words "Low Rating".

```
D5_86982_JUILI@>select cname,city,rating ,'High Rating' as Rating from custo
mers
    -> where rating>=200
    -> union
    -> select cname, city, rating , 'Low Rating' as Rating from customers
    -> where rating<200;
             city
                         rating
                                  Rating
  cname
  Giovanni
                                   High Rating
             Rome
                            200
  Liu
             San Jose
                            200
                                   High Rating
  Grass
             Berlin
                            300
                                   High Rating
  Cisneros
             San Jose
                            300
                                  High Rating
                                  Low Rating
  Hoffman
             London
                            100
             London
                                  Low Rating
  Clemens
                            100
  Pereira
                            100
                                  Low Rating
             Rome
  rows in set (0.00 sec)
```

2) Write a command that produces the name and number of each salesperson and each customer with more than one current order. Put the results in alphabetical order.

```
D5_86982_JUILI@>select cname.orders.cnum.count(orders.cnum) as 'Total Orders' from orders , customers
       where orders.cnum=customers.cnum
       group by cname,cnum
    -> having count(orders.cnum)>1
-> union all
    -> select sname,orders.snum ,count(orders.snum) as'Total Orders' from orders,salespeople
-> where salespeople.snum=orders.snum
    -> group by sname,snum
-> having count(orders.snum)>1
    -> order by 1;
                       Total Orders
  cname
               cnum
  Cisneros
               2008
                                     2
                                    2
               2006
  Clemens
               2004
  Grass
               1001
  Peel
  Rifkin
               1007
               1002
  rows in set (0.00 sec)
```

3) Form a union of three queries. Have the first select the snums of all salespeople in San Jose; the second, the cnums of all customers in San Jose; and the third the onums of all orders on October 3. Retain duplicates between the last two queries but eliminate any redundancies between either of them and the first. (Note: in the sample tables as given, there would be no such redundancy. This is beside the point.)

```
D5_86982_JUILI@>select snum from salespeople
    -> where city = 'San Jose'
    -> union
    -> select cnum from customers
    -> where city = 'San Jose'
    -> union
    -> select onum from orders
    -> where odate = '1990-10-03';
  snum
  1002
  2003
  2008
  3001
  3003
  3002
  3005
  3006
 rows in set (0.00 sec)
```
